Identification of Scopus-Indexed Venues (Q1–Q4), Book Chapter and IPR

NeuroSonic project · Allwin Raj · Vellore Institute of Technology · 3 November 2026

How to read this document. Quartiles change every year and differ by subject category. Values below were checked on 3 November 2026 from SCImago pages or search snippets of them; where we could not confirm a value it says *verify*. Before submitting, open each venue's SCImago page (scimagojr.com) and the publisher's current author guidelines, and confirm Scopus indexing of any conference in its call for papers.

1. What the Work Can Support Today

The evidence available now is: a survey; a reproducibility study of a 2025 *Nature Communications* system with a bit-identical re-implementation and a dataset audit; a controlled detector comparison; and a full system implementation with laptop benchmarks, soak tests and automated tests. There is **no** iPhone field test and **no** user study yet. Journals in assistive technology normally expect user evaluation, so the realistic plan is a conference paper or book chapter now, and a journal article after the validation protocol (and, for users, ethics approval) is completed.

2. Candidate Venues

Table 1. Candidate Scopus-indexed venues

Venue	Type, publisher	Scopus quartile (as checked)	Fit	What it needs from us
IEEE Sensors Journal [1]	journal, IEEE	Q1 (2024: Electrical & Electronic Eng.; Instrumentation)	moderate: sensing systems; ours is camera-only	field results; stronger sensing contribution
Sensors [2]	open-access journal, MDPI	Q1–Q2 depending on category (2024 SJR 0.764)	good: related works published there [3], [4]	field and user results; APC
IEEE Access [5]	open-access journal, IEEE	*verify* (2024 SJR 0.849)	good for applied systems	complete evaluation; APC
Disability and Rehabilitation: Assistive Technology	journal, Taylor & Francis	*verify* (an aggregator lists JCR Q2)	excellent topic fit	user study is essential
Scientific Reports	open-access journal, Springer Nature	*verify*	published a 2025 related study [6]	rigorous evaluation; APC

Lecture Notes in Networks and Systems [7]	conference proceedings / book series, Springer	Q4 (best quartile; 2025 SJR 0.165)	good for the system paper now	conference acceptance; usually 10–15 pages
IEEE conference in IEEE Xplore	conference proceedings	conference proceedings are Scopus-indexed but have no quartile	good for the system or reproducibility paper now	check that the CFP states Scopus / IEEE Xplore indexing
Book chapter (edited volume, Springer / CRC / IGI)	book chapter	depends on the series	good for the consolidated report (≥ 15 pages)	call for chapters on assistive technology or AI for healthcare
Indian patent (provisional, then complete)	IPR, Indian Patent Office via VIT IPR cell	not applicable	features in Lab 9 IDF	file before any public disclosure

3. Recommended Plan

1. **IPR first (now).** Submit the Lab 9 IDF to the IPR cell. Keep the GitHub repository private and the video unlisted until the cell advises, because publication before filing can destroy novelty.
2. **Conference paper or book chapter (next).** Adapt the Lab 10 draft as a system paper: "laptop-assisted, offline phone-based awareness with motion-compensated events, and lessons from serving a GPU at a fixed frame rate". Target: an IEEE conference indexed in IEEE Xplore, or a Springer conference published in LNNS (Q4). For a book chapter, the consolidated report already exceeds the 15-page requirement.
3. **Contact the base-paper authors (before publishing the reproducibility findings).** Ask whether the labelled person/Ebike/Car data of the reported run is available. Good practice, and it may let the reported accuracy be re-measured.
4. **Journal article (after validation).** Run the 23-scenario iPhone protocol; obtain ethics approval for a study with visually impaired participants; then submit to *Sensors* or *IEEE Access*, or, with a substantial user study, *Disability and Rehabilitation: Assistive Technology*.

4. Checklist Before Any Submission

- Confirm the author list, affiliation and guide's name (author line currently "Allwin Raj, VIT Vellore").
- Confirm the venue's current quartile and indexing on SCImago and in the call for papers; avoid venues that are not listed there or that promise publication for a fee without review.
- Convert the draft to the venue's official template (IEEE LaTeX/Word or Springer LNCS/LNNS).
- Keep the separation of laptop results, simulated browser results and pending field tests.

- Check licences of third-party components and figures (all figures in the drafts are our own).
